Advanced Digital Temperature Controller E5CN-H (48 x 48 mm)

A New High-performance Controller: High Resolution, High Speed, and High Input Accuracy. Logic Operations and Preventive

- High-resolution display with 5 digits/0.01°C display in a compact Controller (48 x 48 mm).
- High-speed sampling cycle of 60 ms.
- High Accuracy Thermocouple/Pt input: ±0.1% of PV Analog input: ±0.1% FS
- Universal inputs on all models (thermocouple, PT, or analog input) to handle various sensors with one Controller.
- A PV/SV-status display function can be set to automatically alternate between displaying the status of the Temperature Controller (auto/ manual, RUN/STOP, and alarms) and the PV or SV.
- Flexible contact outputs with logic operations (AND, OR, and delays) set from the Support Software (CX-Thermo Ver. 4.0)
- Preventive maintenance for relays in the Temperature Controller using a Control Output ON/OFF Counter.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Refer to Safety Precautions for E5_N/E5_N-H.

Refer to *Operation for E5_N/E5_N-H* for operating procedures.

This data sheet is provided as a guideline for selecting products. Be sure to refer to the following user manuals for application precautions and other information required for operation before attempting to use the product.

E5CN-H/E5AN-H/E5EN-H Digital Controllers User's Manual Advanced Type (Cat. No. H157)

E5CN-H/E5AN-H/E5EN-H Digital Controllers Communications Manual Advanced Type (Cat. No. H159)

Lineup

Note: Models with one control output and models with two control outputs can be used for heating/cooling control.

Y92F-49	

Note: This Mounting Adapter is provided with the Digital Temperature Controller.

Specifications

Ratings

nating	,5							
Power su	upply voltage	No D in model number: 100 to 240 VAC, 50/60 Hz D in model number: 24 VAC, 50/60 Hz; 24 VDC						
Operatin	g voltage range	85% to 110% of rated supply voltage						
Power co	onsumption	100 to 240 VAC: 8.5 VA (max.) (E5CN-HR2 at 100 VAC: 3.0 VA) 24 VAC/VDC: 5.5 VA (24 VAC)/3.5 W (24 VDC) (max.) (E5CN-HR2D at 24 VAC: 2.7 VA)						
Sensor ir	nput	Any of the following can be selected (i.e., fully universal input). Thermocouple: K, J, T, E, L, U, N, R, S, B, W, or PL II Platinum resistance thermometer: Pt100 or JPt100 Current input: 4 to 20 mA or 0 to 20 mA Voltage input: 1 to 5 V, 0 to 5 V, or 0 to 10 V						
Input imp	pedance	Current input: 150 Ω max., Voltage input: 1 M Ω min. (Use a 1:1 connection when connecting the ES2-HB-N.)						
Control r	nethod	ON/OFF control or 2-PID control (with auto-tuning)						
	Relay output	SPST-NO, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 10 mA						
Control	Voltage output (for driving SSR)	Output voltage: 12 VDC \pm 15% (PNP), max. load current: 21 mA, with short-circuit protection circuit						
output	Current output	4 to 20 mA DC/0 to 20 mA DC, load: 600 Ω max., resolution: approx. 10,000 *						
	Linear voltage output	0 to 10 VDC (load: 1 k Ω min.), Resolution: Approx. 10,000						
Auxiliary	Number of outputs							
output	Output specifications	Relay output: SPST-NO, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations, minimum applicable load: 5 V, 10 mA						
	Number of outputs	2						
Event	External contact	Contact input: ON: 1 k Ω max., OFF: 100 k Ω min.						
input	input	Non-contact input: ON: Residual voltage: 1.5 V max., OFF: Leakage current: 0.1 mA max.						
	specifications	Current flow: Approx. 7 mA per contact						
	Number of operations	8 max. (Combinations can be made using work bits.)						
Logic opera- tions	Operations	 Logic operation: Any of the following four patterns can be selected. The input status may be inverted. (A and B) or (C and D), (A or C) and (B or D), A or B or C or D, A and B and C and D (A, B, C, and D are four inputs.) Delay: ON delay or OFF delay for the results of the logic operation given above. Setting time: 0 to 9999 s or 0 to 9999 min Output inversion: Possible 						
	Outputs	One work bit per operation						
	Work bit assignments	Any of the following can be assigned to up to eight work bits (logic operation results): Event input operations, auxiliary outputs, or control outputs.						
-	Number of outputs	1 max.						
Transfer outputs	Output specifications	Current output: 4 to 20 mA DC, Load: 600 Ω max., Resolution at 4 to 20 mA: Approx. 10,000						
RSP inpu	ıt	Not supported						
Setting method		Digital setting using front panel keys						
Indication method		11-segment digital display and individual indicators (7-segments displays also possible) Character height: PV: 11 mm, SV: 6.5 mm						
Bank switching		Supported (number of banks: 8) Local SP, alarm settings, PID sets (PID constants, MV upper limit, MV lower limit, etc.)						
Other functions		Manual output, heating/cooling control, loop burnout alarm, SP ramp, other alarm functions, heater burnout detection, 40% AT, 100% AT, MV limiter, input digital filter, self-tuning, temperature input shift, run/stop, protection functions, control output ON/OFF counter, extraction of square root, MV change rate limit, PV/SV status display, logic operations, automatic cooling coefficient adjustment						
Ambient temperat	operating ure	-10 to 55°C (with no condensation or icing), for 3-year warranty: -10 to 50°C						
Ambient	operating humidity	25% to 85%						
-	temperature	-25 to 65°C (with no condensation or icing)						
	lala with a ware a train	to control output 1 can be used as a transfer output						

* For models with current outputs, control output 1 can be used as a transfer output.

Shaded settings are the default settings.

The applicable standards for the input types are as follows:

K, J, T, E, N, R, S, B: JIS C 1602-1995, IEC 584-1

L: Fe-CuNi, DIN 43710-1985

U: Cu-CuNi, DIN 43710-1985

W: W5Re/W26Re, ASTM E988-1990

JPt100: JIS C 1604-1989, JIS C 1606-1989

Pt100: JIS C 1604-1997, IEC 751

PL II: According to Platinel II electromotive force charts from BASF (previously Engelhard)

Alarm Outputs

Each alarm can be independently set to one of the following 13 alarm types. The default is 2: Upper limit. Auxiliary outputs are allocated for alarms. ON delays and OFF delays (0 to 999 s) can also be specified.

Note: For models with heater burnout, SSR failure, and heater overcurrent detection, alarm 1 will be an OR output of the alarm selected from the following alarm types and the alarms for heater burnout, SSR failure, and heater overcurrent. To output only a heater burnout alarm, SSR failure alarm, and heater overcurrent alarm for alarm 1, set the alarm type to 0 (i.e., no alarm function).

		Alarm outp	ut operation					
Set value	Alarm type	When alarm value X is positive	When alarm value X is negative	Description of function				
0	Alarm function OFF	Output OFF		No alarm				
1 *1	Upper- and lower-limit		*2	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).				
2	Upper-limit	ON OFF SP	ON X CON OFF SP	Set the upward deviation in the set point by setting the alarm value (X).				
3	Lower-limit	ON X SP	ON X SP	Set the downward deviation in the set point by setting the alarm value (X).				
4 *1	Upper- and lower-limit range	ON OFF SP	*3	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).				
5 *1	Upper- and lower-limit with standby sequence	ON → L H ← OFF SP ★5	*4	A standby sequence is added to the upper- and lower-limit alarm (1). ≭6				
6	Upper-limit with standby sequence	ON → X ← OFF SP	ON X CON OFF SP	A standby sequence is added to the upper-limit alarm (2). *6				
7	Lower-limit with standby sequence	ON X SP	ON X COFF SP	A standby sequence is added to the lower-limit alarm (3). *6				
8	Absolute-value upper-limit		ON OFF 0	The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.				
9	Absolute-value lower-limit	$\begin{array}{c} ON \\ OFF \end{array} \qquad \begin{array}{c} \leftarrow X \rightarrow \\ 0 \end{array}$		The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.				
10	Absolute-value upper-limit with standby sequence	ON ←X→ OFF 0		A standby sequence is added to the absolute-value upper-limit alarm (8). *6				
11	Absolute-value lower-limit with standby sequence	$\begin{array}{c} ON \\ OFF \end{array} \qquad \begin{array}{c} \leftarrow X \rightarrow \\ 0 \end{array}$	ON OFF 0	A standby sequence is added to the absolute-value lower-limit alarm (9). *6				
12	LBA (alarm 1 type only)	-		*7				
13	PV change rate alarm	-	-	*8				

|H| ≤ |L|

*1. With set values 1, 4 and 5, the upper and lower limit values can be set independently for each alarm type, and are expressed as "I " and "H.'

*2. Set value: 1, Upper- and lower-limit alarm

*3. Set value: 4, Upper- and lower-limit range

*4. Set value: 5, Upper- and lower-limit with standby sequence For Upper- and Lower-Limit Alarm Described Above

Case 1 and 2

Always OFE when the upper-limit and lower-limit hysteresis overlaps.

Case 3: <u>Always OFF</u>

*5. Set value: 5, Upper- and lower-limit with standby sequence Always OFF when the upper-limit and lower-limit hysteresis overlaps.

*6. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the operation of the standby sequence.

- *7. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the loop burnout alarm (LBA).
- *8. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the PV change rate alarm.

*1. The indication accuracy of K thermocouples in the -200 to 1300°C range, T and N thermocouples at a temperature of -100°C max., and U and L thermocouples at any temperatures is ±2°C ±1 digit max. The indication accuracy of the B thermocouple at a temperature of 400°C max. is not specified. The indication accuracy of B thermocouples in the 400 to 800°C range is ±3°C max. The indication accuracy of the R and S thermocouples at a temperature of 200°C max. is ±3°C ±1 digit max. The indication accuracy of W thermocouples is ±0.3 of PV or ±3°C, whichever is greater, ±1 digit max. The indication accuracy of PL II thermocouples is ±0.3 of PV or ±2°C, whichever is greater, ±1 digit max.

*2. Ambient temperature: -10°C to 23°C to 55°C, Voltage range: -15% to 10% of rated voltage

***3.** K thermocouple at -100°C max.: ±10°C max.

*4. External communications (RS-232C or RS-485) and cable communications for the Setup Tool can be used at the same time.

***5.** Refer to information on maritime standards in *Safety Precautions for E5_N/E5_N-H* for compliance with Lloyd's Standards.

***6.** Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)

USB-Serial Conversion Cable

Windows XP/Vista/7/8/8.1/10
CX-Thermo version 4 or higher
E5AN/E5EN/E5CN/E5CN-U/ E5AN-H/E5EN-H/E5CN-H
Conforms to USB Specification 1.1.
38400 bps
Computer: USB (type A plug) Temperature Controller: Setup Tool port (on bottom of Controller)
Bus power (Supplied from USB host controller.)
5 VDC
70 mA
0 to 55°C (with no condensation or icing)
10% to 80%
-20 to 60°C (with no condensation or icing)
10% to 80%
2,000 m max.
Approx. 100 g

Note: A driver must be installed in the personal computer. Refer to installation information in the operation manual for the Conversion Cable.

Communications Specifications

Transmission line	RS-485: Multipoint					
connection method	RS-232C: Point-to-point					
Communications	RS-485 (two-wire, half duplex)/RS-232C					
Synchronization method	Start-stop synchronization					
Protocol	CompoWay/F, SYSWAY, or Modbus					
Baud rate	1200, 2400, 4800, 9600, 19200, 38400, or 57600 bps					
Transmission code	ASCII (CompoWay/F, SYSWAY) RTU (Modbus)					
Data bit length *	7 or 8 bits					
Stop bit length *	1 or 2 bits					
Error detection	Vertical parity (none, even, odd) Frame check sequence (FCS) with SYSWAY Block check character (BCC) with CompoWay/F or CRC-16 Modbus					
Flow control	None					
Interface	RS-485, RS-232C					
Retry function	None					
Communications buffer	217 bytes					
Communications	0 to 99 ms					
response wait time	Default: 20 ms					

* The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

Current Transformer (Order Separately) Ratings

Dielectric strength	1,000 VAC for 1 min
Vibration resistance	50 Hz, 98 m/s ²
Weight	E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g
Accessories (E54-CT3 only)	Armatures (2) Plugs (2)

Heater Burnout Alarms, SSR Failure Alarms, and Heater Overcurrent Alarms

CT input (for heater current detection)	Models with detection for single- phase heaters: One input Models with detection for single- phase or three-phase heaters: Two inputs					
Maximum heater current	50 A AC					
Input current indication accuracy	±5% FS ±1 digit max.					
Heater burnout alarm setting range *1	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms					
SSR failure alarm setting range *2	0.1 to 49.9 A (in units of 0.1 A) Minimum detection OFF time: 100 ms					
Heater overcurrent alarm setting range *3	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms					

*1. For heater burnout alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is lower than the set value (i.e., heater burnout detection current value).

- ***2.** For SSR failure alarms, the heater current will be measured when the control output is OFF, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., SSR failure detection current value).
- *3. For heater overcurrent alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., heater overcurrent detection current value).

Electrical Life Expectancy Curve for Relays (Reference Values)

External Connections

 A voltage output (control output, for driving SSR) is not electrically insulated from the internal circuits. When using a grounding thermocouple, do not connect any of the control output terminals to ground. If the control output terminals are connected to ground, errors will occur in the measured temperature values as a result of leakage current.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warrantv.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

2022.3

In the interest of product improvement, specifications are subject to change without notice.
