Wiring Example for I/O Connectors

Wiring Example for Two-wire Sensors

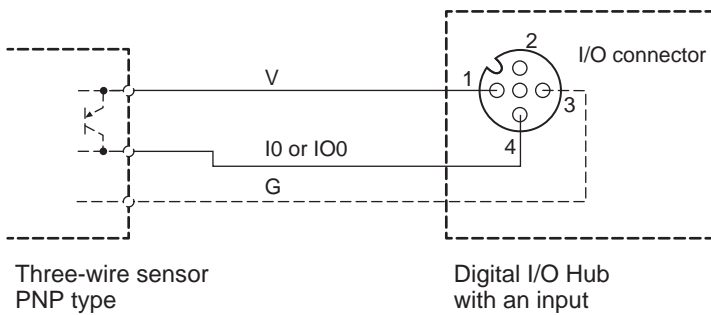

A wiring example for a 2-wire sensor to an input of the Digital I/O Hub is given below. In this example, pin 4 of port 1 serves as an input.

The power to pin 1, or +(V), is supplied from the IO-Link Master Unit through the IO-Link cable to the Digital I/O Hub.

Wiring Example for Three-wire Sensors

A wiring example for a 3-wire sensor to an input of the Digital I/O Hub is given below. In this example, pin 4 of port 1 serves as an input.

The power to pin 1, or +(V), is supplied from the IO-Link Master Unit through the IO-Link cable to the Digital I/O Hub.

Wiring Example for an Output Device

A wiring example for output device to an output of the Digital I/O Hub is given below. In this example, pin 4 of port 1 serves as an output.

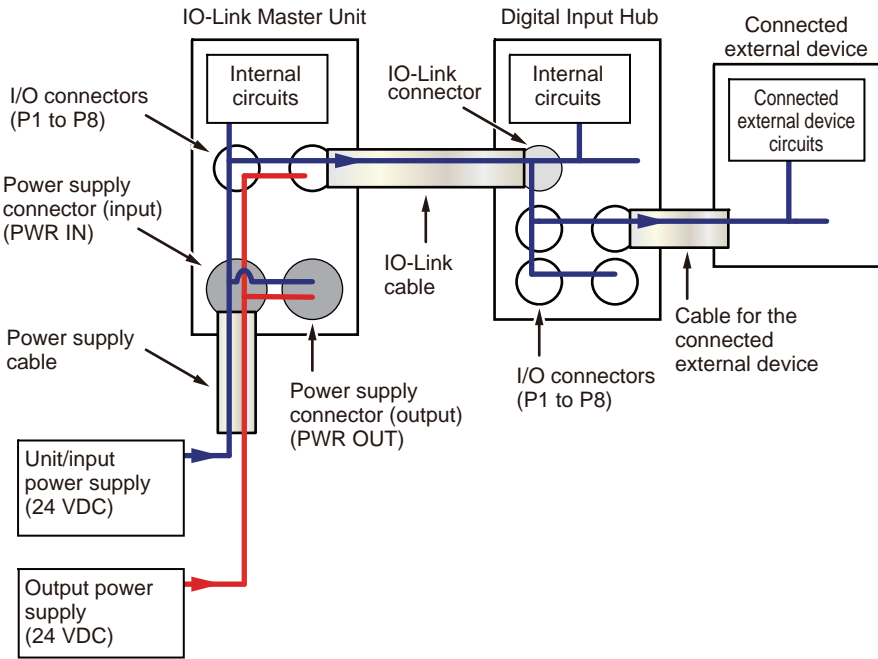

The output power that provides load current is supplied from the IO-Link Master Unit through the IO-Link cable to the Digital I/O Hub.

Power Supply System

The following shows the power supply system for the IO-Link I/O Hubs. The Unit/input power and output power are supplied from the IO-Link Master Unit, which is connected to an external power supply, through the IO-Link cable to the IO-Link I/O Hub.

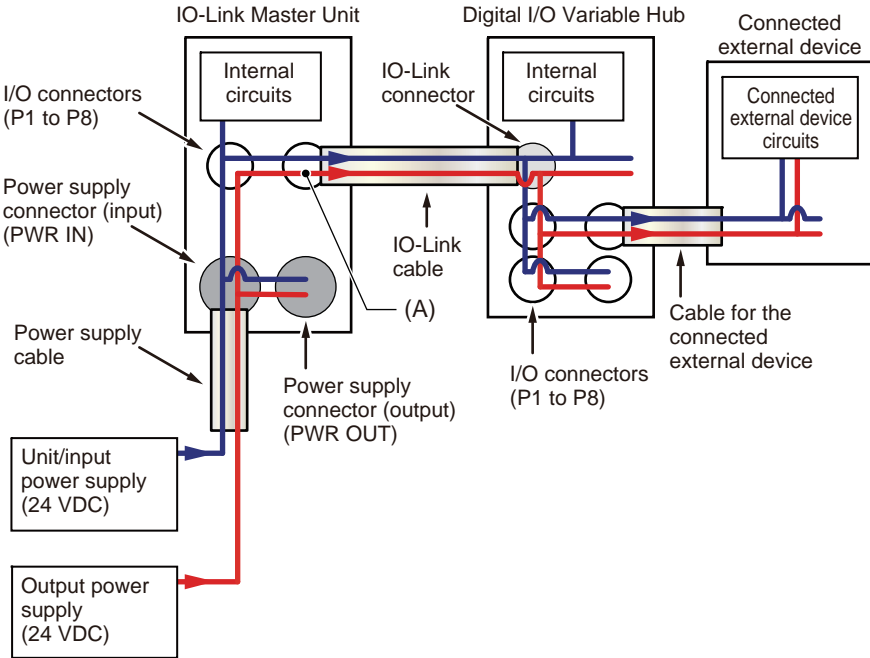

Digital Input Hub (NXR-ID166C-IL2)

The Digital Input Hub does not require the output power to be supplied to the Hub.

Digital I/O Variable Hub (NXR-CD166C-IL2)

Set pin 2 of the port of the IO-Link Master Unit to SIO (DO) Mode, and turn on the output of pin 2. (See following figure (A).)
